

Guidelines for Authors of Abstracts for the Spring 2011 PeWe Workshop

Jozef MRKVIČKA*

Slovak University of Technology
Faculty of Informatics and Information Technologies
Ilkovičova 3, 842 16 Bratislava, Slovakia
mrkvicka@fiit.stuba.sk

Each abstract represents the key issues of the authors' work on a project related to the area of web technologies or web engineering. The header consists of the title, author's name and address. In the footnote place the name of the supervisor together.

The abstract should describe the main ideas and the expected contribution of the project work. Please do not use any headings. The abstract should contain exactly 2 pages formatted according to this template. It is advantageous to include a picture representing a schema of proposed solution. 2-4 references are also welcomed.

For texts use the *Times New Roman* font, the use of other fonts than defined in this template is not allowed. The first paragraph after a heading has to be formatted using the style *Normal First*, while each following paragraph is formatted using the style *Normal*. For other texts use standard formatting techniques, such as unnumbered list (*Style Bulleted*):

- Item 1
- Item 2
 - Item 2.1
 - Item 2.1.1
- Item 3

The text which follows right after an itemized list (e.g., *Style Bulleted* or *Style Numbered*), figures, tables or equations should be formatted as *Normal First*. A numbered list should be formatted as follows:

1. Item 1
2. Item 2
 - a. Item 2.1
 - i. Item 2.1.1

* Supervisor: Name Surname, Institute of Informatics and Software Engineering

3. Item 3

Do not add any page numbering to your paper other than the one predefined in this template as the final numbering will be provided by proceedings editor. Similarly, avoid the use of references using page numbers.
