

Design your web

By using our editor tool, you can make mockups composed of images or screenshots that will fulfill all your deepest wishes

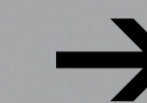

Create & Publish

You can then create tests and make your mockup available for online testing

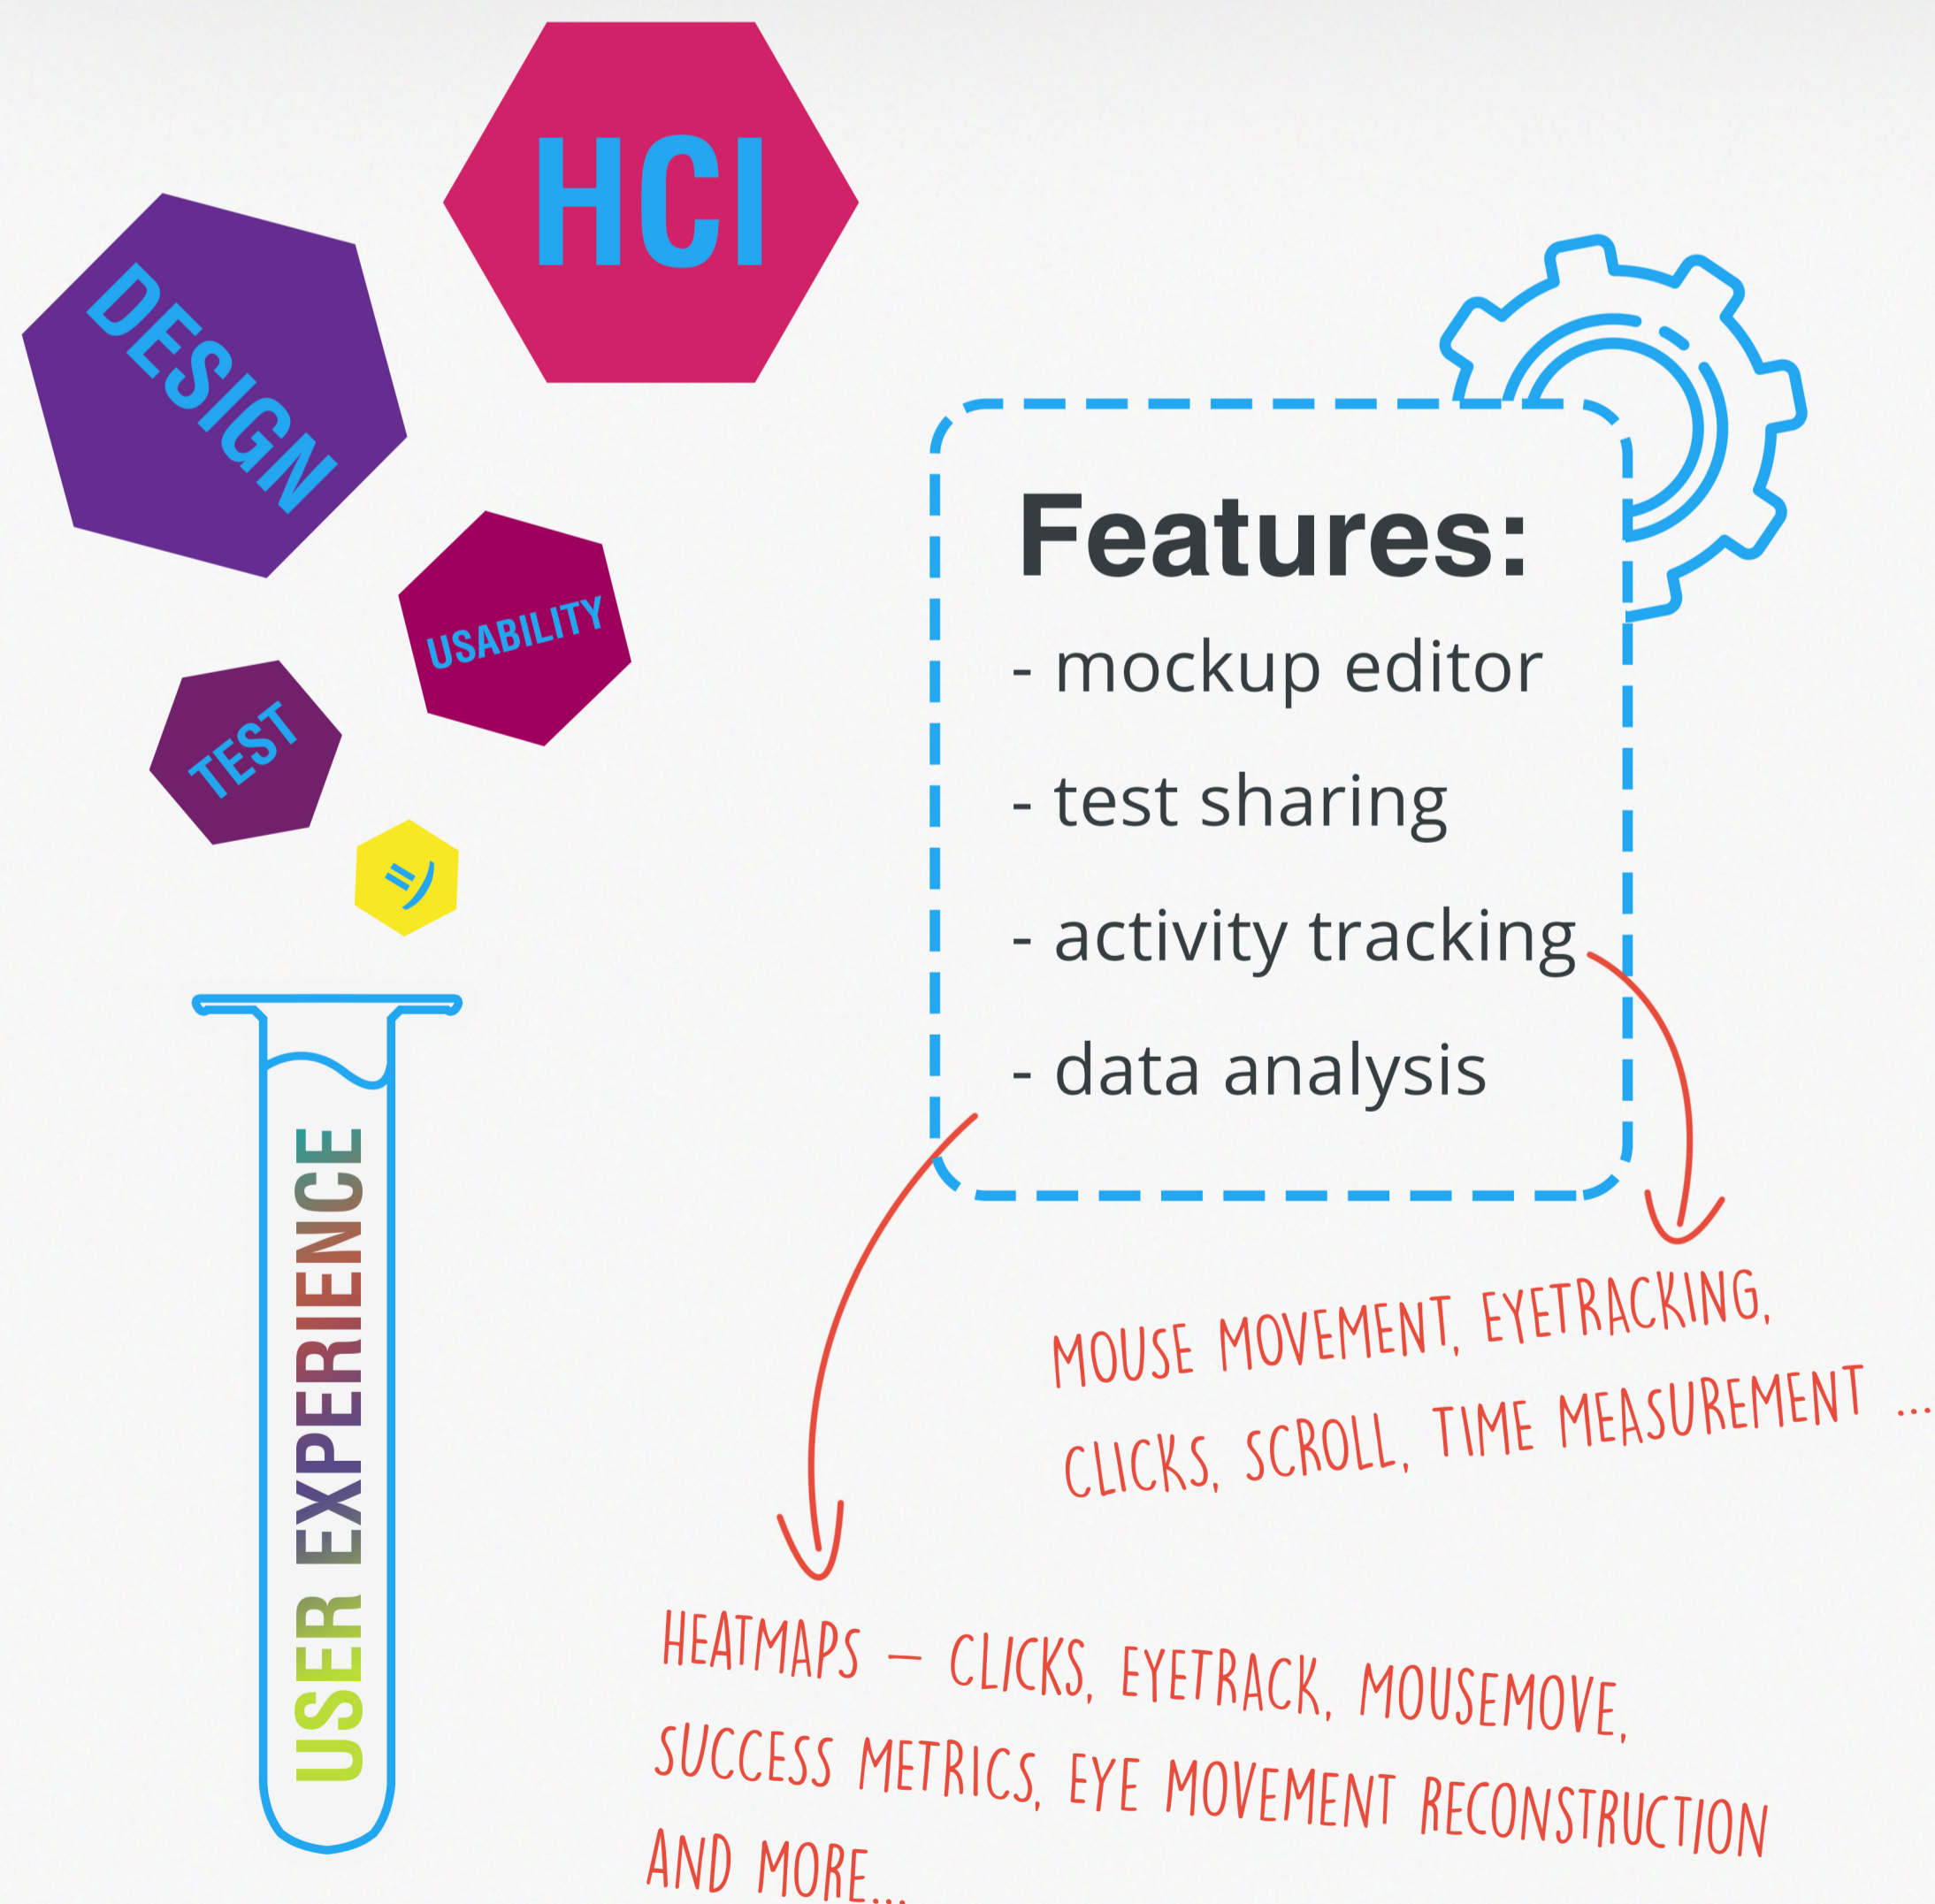

Test online

With sUXess your mockup can be tested immediately online by multiple users all around the world just by sharing a single link

Evaluate

User interaction with test is monitored and evaluated. You are then presented with multiple statistics, graphs and heatmaps.

CREATE BETTER WEB

- Gather data from interaction
- Learn how users see your web
- Validate your UI design
- Fulfill your customer needs

How does it work?

REST API

ANGULARJS

We are using Ruby On Rails as our backend server to provide REST API for AngularJS frontend. RoR server is responsible for test management and metrics evaluation.

Frontend is powered by AngularJS and our own javascript library. Using AngularJS and our editor you can create tests and let others to participate directly only just by using their browser. As soon as first activity records come in you can see statistics and graphs on result page.
