Boston Terrier.

The Boston Terrier was the first dog breed created exclusively in the USA and was accredited by the American Kennel Club in 1893. Though originally bred for fighting, Boston Terriers were instead soon bred for gentle companionship. These intelligent dogs have strong, friendly personalities and range in temperament from eager to please to rather willful. Boston Terriers, along with Pugs and Shih Tzus, are *Brachycephalic* breeds -- Greek meaning *short-heads*. This anatomy often causes loud snoring and prolonged bouts of spasmodic snorting -- neither of which causes these lovely dogs any harm. The Boston Terrier is also the namesake of Boston University's formidable sports teams.
