Feedback recommendation in the domain of programming

Problem solving

Learning systems (Peoplia)

Author: Tomáš Matlovič
Supervisor: Mgr. Jozef Tvarožek, PhD.

Usage scenario

1) Student get stuck

2) We generate hint

3) Help find a mistake

4) No need to ask teacher, save time

5) Feedback from student whether the hint was
   useful or not

How?

- Find correct solutions of the problem

- Compare them with faulty solution

- Find the spot where they start to differentiate - that's where the mistake is

- Interpret feedback/hint based on this mistake
